

Summary

I am a software developer with more than 10 years of experience, with a focus on backend web development. I have more than 5 years of experience in the Rust programming language. I take pride in writing elegant and maintainable code. I love and prefer working with and contributing to open source software projects.

Skills

Rust	Tokio	axum	Diesel	PostgreSQL	PostGIS	Redis	Varnish
OpenID Connect	OpenAPI	JSON-LD	Hydra	Automerge	CRDT	FRP	
Docker	Docker Compose	GitHub Actions	GitLab CI	Bash	Linux		

Projects

tapir2p

(May 2026–Present)

[WIP] A peer-to-peer ActivityPub experiment.

cyclers

(July 2025–November 2025)

[WIP] A functional and reactive framework. Inspired by Cycle.js.

Hexciv

(September 2024–June 2025)

[WIP] Civ VI inspired game, written in Rust using the Bevy game engine.

HyFetch

(June 2024–October 2024)

Ported the entire project from Python to Rust. Released since hyfetch 2.0.1.

muvm

(April 2024–Present)

Ported the entire project from C to Rust. I am a co-maintainer of the project.

Experience

CariBid

Software Engineer (Contractor)

(November 2024–June 2026)

- Revamped and hardened authentication system. Integrated OpenID Connect for authentication with Amazon Cognito. Implemented Token-Mediating Backend pattern and other security best practices.
- Implemented bid processing for online auctions. Implemented validation for placement of bids from authorized users for both public and private auctions. Integrated real-time push of bid updates using server-sent events.
- Implemented background processing for completed auctions. Implemented scheduling of background jobs for performing post-auction close tasks.

Bowtie

Software Engineer (Contractor)

(August 2022–December 2023)

- Integrated OpenID Connect for authentication.
- Refactored project to improve separation and maintainability.
- Migrated away from in-house legacy persistence layer to higher-level integration library by Automerge upstream.

Les-Tilleuls.coop

Lead Developer

(February 2018–July 2020)

- Maintained API Platform framework as a Core Team member.
- Planned and executed upgrade process of LVMH projects to newer Symfony and API Platform versions.
- Developed new features and delivered quality improvements for Corum Asset Management project.

Tripviss

Software Engineer

(July 2015–August 2017)

- Designed and built backend web API for travel e-commerce platform startup. Maintained database of travel destinations and POIs, queryable by geometry. Implemented tagging of travel destinations and POIs in tour and activity itineraries. Implemented full-text search for tour and activity products.
- Contributed to API Platform development, and thereafter made a Core Team member.

Company27

Front-end Developer

(September 2014–December 2014)

Corpick

Software Engineer

(April 2013–August 2014)

- Designed and built web-based system for home and gifts e-commerce store startup.

SeedNet Technologies

Software Development Engineer

(March 2013)

- Developed and integrated stored procedures for web-based plant operations system for Petronas Chemicals.

Education

Bachelor of Computer Science

RMIT University, Australia

(2012)

Diploma in Information Technology

INTI International College Penang, Malaysia

(2010)
